

GreenTech

The engineer's choice

ebmpapst

Sustainability is at the Center of Our Thoughts and Actions!

Eco-friendliness and sustainability have always been at the core of our thoughts and actions. For decades, we have worked according to the simple but strict creed of our co-founder Gerhard Sturm: "Each new product we develop has to be better than the last in terms of economy and ecology." GreenTech is the ultimate expression of our corporate philosophy.

GreenTech is pro-active development.

Even in the design phase, the materials and processes we use are optimized for the greatest possible eco-friendliness, energy balance, and wherever possible, recyclability. We continually improve the materials and performance of our products to significantly reduce energy consumption. Close cooperation with universities and scientific institutes in the area of power engineering and regenerative energies allows us to profit from the latest research findings in these fields.

GreenTech is ecofriendly production.

GreenTech also stands for maximum energy efficiency in our production processes. The intelligent use of industrial heat waste, groundwater cooling, photovoltaics, and our own cooling and ventilation technology is of the utmost importance. Our modern plant for instance, consumes 91% less energy than required. Our eco-friendly products protect the environment from their development to recyclable packaging.

GreenTech is acknowledged and certified.

Every step in our chain of production meets the stringent standards of environmental specialists and regulations. ebm-papst has been awarded the 2008 Environmental Prize of Baden-Wuerttemberg, the Green Award 2009, and the 2009 Energy Efficiency Award of the DENA, just to give a few examples. The environmental advantage gained through the performance of the products developed from our GreenTech philosophy can also be measured in the fulfillment of the most stringent energy and environmental standards. Our products are already below the thresholds energy legislation will impose in the future - several times over.

Our customers profit from our products every day.

EC technology is the core of our most energy efficient products and the heart of GreenTech. EC provides up to 90% of energy savings, significantly extends service life, and makes our products maintenance-free. These benefits not only pay off for the environment, but also pays off for the user!
